

Bridge to Business for Engineers is an immersive, three-week experience to give early-career engineers the business fundamentals they need to be successful in today's quickly evolving marketplace. Through a mix of classroom study, interaction with leading industry experts and real-world exercises, recent engineering graduates will gain a better understanding and appreciation of the business enterprise.

At the heart of Bridge to Business is an integrated curriculum that models the relationship between technical and business roles, and a custom-designed project that lets students put their knowledge into action.

Bridge to Business is a unique partnership of Marquette University's Opus College of Engineering and College of Business Administration and Milwaukee-based manufacturer Rexnord. Courses are taught by Marquette business and engineering faculty, as well as adjunct instructors from industry.

"We see great value in an engineering program that provides a solid technical background supplemented with broader business knowledge. This skill set will set graduates apart in the workplace."
